**Turn your bathroom into
a comfortable lounge
with the Smart Mirror**

Alke

Automatic light with sensor

A row of white LEDs around the edge guarantees even light distribution and, unlike halogen bulbs, does not project any real shadow. Beneath the mirror is another low-energy LED light that provides the ambient lighting. This indirect light on the wall induces soft tones, providing added ambiance.

Mirror heating

In the mirror itself, there is humidity control, courtesy of a microscopically thin heating filament between the layers of mirror glass. As soon as the mirror's surface begins to mist up, this simple and low-energy demisting system is triggered by the humidity detector.

Clock & temperature

All relevant information is easily readable through the multifunctional display integrated in the central mirror panel.

Kg Scales

As an option, the Smart Mirror can also be supplied with special bathroom scales that are built into the floor and connected to the multifunctional screen via a data cable.

Fixed sound installation

At Smart Mirror's base are a pair of high-quality loudspeakers plus an ultra-powerful amplifier. The system can easily be connected to a central hifi-audio-system.

Music via Bluetooth®

The Smart Mirror gives you direct access to various audio sources. There is a connection for radios, smartphones and mp3-players. Bluetooth-module is also included.

Mood lighting

Beneath the mirror is another low-energy LED light that provides the ambient lighting. This indirect light on the wall induces soft tones, providing added ambiance and can be used for night light.

Easily dimmable

The Smart Mirror is full of sophisticated technology, but is easy to use. Changing the luminosity can be done through the multifunctional display integrated in the central mirror panel.
