Software for logistic excellence

TSM - Time Slotting Management

About

TSM or Time slot management is a webtool that helps you to optimize your yard planning. Improve the overview on your planning and capacity and schedule your employees for the right moments. An improved schedule reduces waiting times and increases productivity. Peaks are flattened by scheduled slots due to the fine-tuning of these registrations of your warehouse software.

The slotting system allows integrations with external systems.

Functionalities

TSM facilitates the booking process. First, the transport company selects which actions need to be executed (loading, unloading, both) and fills in one or more references.

The system calculates the needed time for a certain loading-/unloading task following the configuration and renders all the possible timeslots available within those templates.

The transport company selects the appropriate hours from a list of all possible timeslots.

A print can be made from all bookings (all documents will be adjusted to a customized structure including logo).

Possibility to integrate with host systems or mobile devices.

Intended for

This tool is suitable for companies that:

- Want to improve the management of their Dock&Yard
- Want to improve capacity problems concerning employees
- Want to reduce waiting times
- Want to improve general productivity

C&W Logistic Software Suite

TSM is part of the C&W Logistic Software Suite which can support you in all execution and integration aspects of your logistics business processes.

Execution

WMS	Warehouse Management System
MES	Manufacturing Execution System
WCS	Warehouse Control System
VOI	Voice Connector
TMS	Transport Management System
TSM	Time Slotting Management

Integration

EDI	Electronic Data Interchange
WPT	Web Portals
CIP	Carrier Integration Platform
HIP	Host integration Platform
