

## AEROFLEET CATAMARAN

Belgium

### Problem

Salt water, moisture, salty air.

Surface outside: polyester.

Surface inside: polyester and wood.

### Solution

- Pre-treatment: degrease thoroughly, possibly sand
- System - outside of the boat:  
**Polyzinc** + 1 layer **Polyguard** (protection of polyester)  
+ antifouling
- System - inside of the boat: **Mixtane**  
MCUs can be applied in the most extreme conditions and were therefore chosen as the most suitable system.  
Every year antifouling = system can resist for years.
