

## BETON MIXER YATE

China

### Problem

Develop a faster system.  
Previously: 3 days.  
Now: maximum 2 days to work wet-on-wet.  
Surface: steel.

### Solution

- Pre-treatment: sanding, removing inequalities
  - System:
    - 1 layer of iron oxide primer **Polysilco**
    - 2 layers of **Cryltane DTS 20** (60-80 microns, wet-on-wet after 30 minutes)
    - 1 layer **Mixtane Clear** (after drying of Cryltane DTS 20)
- Result: less-labour intensive high quality system.
