gabbiani g 3/gt 3
designed to satisfy all requirements of a company that wants to excel at every process of the machining and to be a major player in a continuously changing market.

gabbiani g 3/gt 3 are equipped with a new "EASY & RESPONSIVE" production system with flexible and advanced technologies following "industry 4.0" philosophy which maintain high quality standards.

gabbiani g 3/gt 3
easy and powerful programming software

MAESTRO CUT
The best sizing formula

Maestro Cut: creates all the panels imaginable
- superior performance compared to the previous versions
- intuitive, reliable and customizable operator’s interface depending on customers’ needs
- materials stock: creation of panel storage with an integrated bi-directional connection to Maestro Watch
- off-cuts stock: automatic off-cuts restocking that will be displayed together with the materials stocks
- parts handling management during machining: parking solution for end products, off-cuts and scraps

New control panel: simple, linear and elegant design
- 16/9 21” touch screen

Maestro Cut: 3D EDITOR:
- labels printing software
- 3D simulator (run-time) on board
- graphic editor for cutting diagrams
- panels editor
- cutting editor for grained panels (flame-cut): help functions for programming cutting diagrams with shapes organized according to the layouts on the origin panel
- editor for Macro machining creation

Maestro Cut: UTILITY:
- cuts editor for panels de-tensioning: software program that reduces tensions inside the material on longitudinal cuts guaranteeing cut linearity
- dynamic cutting diagrams editor
- automatic panels editor (FILLER)
- off-cuts stock management: identification and automatic insertion functions of the off-cuts into stock for a future use

Maestro Cut: MANAGER:
- simulator for cycle time calculation, simulated execution of the cutting diagrams of single or multi orders, to verify the machine cycle time needed. It includes 3D instantaneous simulation and 3D real time simulation of the entire process
- priority-based and date-based scheduling of the order
- advanced report

Telesolve
Remote service system to connect the machine’s PC with the service department via Internet.
MAESTRO PATTERN
Optimisation program installed on the machine for:
• simple and efficient creation of optimized cutting programs
• fast configuration of a simplified number of parameters
• off-cuts reduction due to the creation of an overproduction for each element
• off-cuts stock creation with the most used parts

MAESTRO OTTIMO CUT
Maestro Ottimo Cut is the cutting plans optimisation program developed for an immediate and functional management of the single blade beam saws, directly from the office. The new Maestro Ottimo Cut algorithm permits the automatic generation of the cutting plans identifying the best solution among different results suggested, depending on users’ parameters. It includes the following functions:
• material, pieces and edges stocks management
• grained panels management (longitudinal and cross)
• optimization of orders and multi-orders
• preventive calculation of costs and machining time
• labels with integrated graphic editor
• 3D simulator
• sends of cutting programs with labeling data included to the beam saws control
• connection with the business management software

EASY IMPORT (optional)
This software transfers columns and rows previously selected by the user and containing all necessary data for the optimisation to Maestro Pattern. Functions are easy to access through icons inserted on the MS Excel toolbar:
• 11 fields for panel description (length, width, quantity, grain...)
• 12 fields of information import for labelling machine
• File XLS import > = Excel 97

EASYCUT (optional)
MS Excel integrative software which transfers to Maestro Cut:
• 10 fields for panel description (length, width, quantity, grain...)
• 36 fields for labelling machine information import (minimum configuration required Excel 97)

EASYCUT (optional)
Maestro Pattern even for the office (optional).

Label printer:
traceability of all finished parts (even the off – cuts).
gabbiani g 3/gt 3
perfection and flexibility of cut

The base: the very best result is guaranteed
Top quality machining on single sheet or panel packs, high-speed cutting, heavy workloads even on three daily shifts.

Prismatic guides with recirculating balls screw: improve machine performance
Minimum friction and automatic lubrication with a remarkable maintenance reduction.
Maximum speed reachable both during the feeding stroke (100 m/min with a single sheet, 50 m/min with a panel stack) and the return stroke (up to 170 m/min).

Air floating table: an essential tool
High efficiency air floating table with feeding rollers eases the sliding of heavy or delicate materials. Maximum protection against risks of friction.

Inverter: no compromise
The possibility to adjust the main blade speed allows a perfect finish with any panel stack height (optional).

Pusher with brushless motor: precision and speed
The best quality and the maximum performance due to the pusher stroke on prismatic guides with recirculating ball screws.

Optimised blade height: for smart cut
The main blade projection is automatically adjusted according to the panel thickness to be cut. It always guarantees an optimum cut quality and reduces the machine cycle time.

The machine base is composed by sturdy tubular steel with oversized nylon wheels for moving panels, even the heaviest without damaging them.
gabbiani g 3/gt 3
perfection and flexibility of cut

Pressure beam: many qualities in a single structure
This structure guarantees a uniform and increased pressure on panels, with an optimum extraction of shavings and simplified maintenance.

Floating clamps with double finger:
safe grip at the highest speed on squaring side, also when panels are not perfectly planar.

Rear pneumatic side aligner for cross cuts: perfect alignment of the piece against the squaring fence and cycle time reduction.
Scoring unit electronic adjustment: technology for real support
The setting from the PC allows the management of a powered system for the scoring unit automatic positioning, drastically reducing the blade set-up time and avoiding any possible errors (with HI-TRONIC carriage as standard equipment).

Grooving execution: production and flexibility
Grooving execution allows machine customisation and makes the machine more productive and versatile (with HI-TRONIC carriage included as standard equipment).

Postforming
Lateral scoring of edged and postformed bars by means of the scoring blade rise (with HI-TRONIC carriage included as standard equipment).

Ampere | Speed

Adaptive control of the saw carriage speed: to work safely
The automatic monitoring of energy absorption of the motor according to the thickness/type of material and the type of the blade used gives the best results avoiding errors or wastes.

Slots execution device: at the operator's service
This particular device allows the carrying out of interrupted cuts inside the panel to produce, for example, slotted doors (with HI-TRONIC carriage included as standard equipment).

Execution of panels de-tensioning cuts
Device that reduces tensions inside the material on longitudinal cuts guaranteeing cut linearity.
Sturdy saw carriage with independent pneumatic raising of the main blade and scoring blade, on prismatic guides with recirculating ball screws (as standard equipment on gabbiani g 3 130/gt 3 130).

“HI-TRONIC vertical stroke” device: maximum productivity
The device allows an optimum finishing and precision cut event at high-speed (optional on gabbiani g 3 130/gt 3 130).

These devices include:
- optimised blade stroke
- fast blades unlocking with AKE mechanical flanges
- self-learning pressure beam
- post-forming
- scoring blade electronic adjustment
- electronic mortising device
- cuts out “windows”

HI-TRONIC: for top performance
The use of motors up to 37 kW ensures reaching the highest speeds. Precision and perfect finish cut due to a balanced solution, which foresees an oscillating movement, rather than a vertical one, of the blade motor. Versatility of use owing to the possibility to install advanced options. Ease of maintenance with the belt tensioning system (as standard equipment on gabbiani g 3 145-165/gt 3 145-165 optional on gabbiani g 3 130/gt 3 130).

Saw-set: tool changing has never been so easy
In a few seconds the “SAW-SET” device carries out fast and precise tools adjustments due to the electronic setting, allowing an intuitive use of the machine and a productivity increase (optional).

Rapid blades locking/unlocking: machining safety in reduced time
This system provides safe and constant blade locking and unlocking, due to the pneumatic system which minimises the standby times for blade changeovers (standard).

AKE device
Rapid locking/unlocking of the scoring blades with “AKE” mechanical flanges “EASYFIX” (“AKE” patent) allowing for quick and easy change of the blades. The tightening is ensured both with high blade-motor power and machining of the hardest materials (optional).
gabbiani g 3/gt 3
optional cut devices

Powered side alignment device:
drastic cycle time reduction and better grip of the piece by means of the brushless motor.

Automatic closure of the cutting line:
it avoids the fall of waste trim cuts inside the machine.

Device for the selective closing of the clamps:
the special shape of the clamps allows a safe panel grip at the maximum speed, while the selective closing device prevents ruining panels which edges are exactly positioned in correspondence of the clamps working area.

FLEXCUT:
The modular FLEXCUT system enables the processing of complex cutting patterns in very rapid cycle times.

Incomparable precision
The use of brushless motors sliding on prismatic guide with recirculating balls screw reduces mechanical parts friction and guarantees best precision.

The extreme flexibility of this device is also ensured by the presence of the main pusher grippers, which can be excluded from the working area, so that strips with different widths can be secured and as a result any type of different cutting can be performed without limiting the stroke.

Simultaneous execution of two-differentiated cuts
Device consisting of a mobile grippers unit whose stroke is completely independent due to the two independent pushers which enable the following operations:
- cross and rip cuts
- cross cuts on side-by-side bars
- cross cut during the platform loading and a following longitudinal cut

INCREASING OF PRODUCTIVITY UP TO 40% AND SPACE SAVING UP TO 20% THANKS TO THE SIMULTANEOUS EXECUTION OF BOTH RIP AND CROSS CUTS.
gabbiani g 3/gt 3
loading platform

Loading platform: when sturdiness and precision make the difference

The lifting system running on 4 large trapezoidal screws is able to maximize the load capacity, with any material and format, always ensuring a parallel lifting of the panels stacks. In this way machine downtimes are avoided achieving maximum productivity.

Front alignment devices for the automatic loading.

Preloading roller conveyors: space is not a problem anymore
One or more preloading roller conveyors allow the endless running of the saw. Loading and unloading systems of the “half stack” and the baseboard or pallet handling offer effective solutions to space and production needs.

Automatic head-cut management device: produce faster
A sturdy metallic frame holds up the panels stack during the rotation cycle. The main pusher automatically moves the panels stack from the loading rear table to the centre of the rotating table. The system automatically manages the cutting of the “Slave” section and the reintroduction and rotation of the “Master” section.

Automatic head-cut management device: produce faster
gabbiani g 3/gt 3
automatic loading of thin and delicate panels

AUTOMATIC LOADING SYSTEM OF THIN PANELS: GABBIANI EXPERIENCE AT CUSTOMER DISPOSAL

Precise and effective device which ensures the automatic loading of thin panels with thickness ranging between 3 and 10 mm.

The device foresees the machine worktable with closure covers.

For the thin panels stack loading/unloading it is compulsory a support panel (25 mm minimum thickness).

The minimum panel stack which can be loaded and aligned is 15 mm.

Suction cup loading system: the perfect solution for panels with delicate coating
The suction cup loading system is integrated in the machine to guarantee minimum space requirements.

The suction device takes the single panel and puts it down in masked-time in the alignment station inside the machine.
flexstore el storage fully integrated in the beam saws: optimising has never been so easy

flexstore el is the SCM solution for the needs of companies making items to order with “just-in-time” production: processing orders quickly, keeping costs down and high quality and productivity standards.

flexstore el is the automatic storage system which is able to serve beam saws, guaranteeing precision, high component quality and great reliability.

The excellent materials management permits high productivity and flexible machining:
Ensure:
• material savings thanks to management of material remaining after machining
• maximum flexibility for multi-function cells
• optimised material management in the production process: less space occupied, without compromising on efficiency
• reduced risk of damage to material thanks to the absence of sliding movements
• full traceability for batch 1 production with automatic labelling
• machines with integrated production process
• reduced order execution times

Secure and precise panels transfer.
The suction cup arm automatically adapts to the different lengths and widths of the panels to be picked up.

---

SAV\textsc{energy}

LOWER CONSUMPTION = LOWER COSTS

Sav\textsc{energy} allows the use of power only when it is required, making things operate only when they are really necessary. It means the machine automatically enters “stand-by” mode when there are no panels to be machined at any particular time. Year saving up to 10% (optional).

---

Maximum noise levels measured according to the operating conditions established by EN 1870-13:2012

Acoustic pressure in process 85 dB(A) (measured according to EN ISO 11202:2010, uncertainty K = ± 4 dB)

Acoustic power in process 103 dB(A) (measured according to EN ISO 3746:2010, uncertainty K = ± 4 dB)

Even if there is a correlation between above mentioned “conventional” noise emission values and average levels of personal exposure of operators over eight hours, these last also depend on the real operating conditions, duration of exposure, acoustic conditions of the working environment and presence of further noise sources, this means the number of machines and other adjacent processes.

---

The technical data can vary according to the requested machine composition; in this catalogue, machines are shown with options. The company reserves the right to modify technical specifications without prior notice; the modifications do not influence the safety foreseen by the CE norms.
THE STRONGEST WOOD TECHNOLOGIES ARE IN OUR DNA

SCM. A HERITAGE OF SKILLS IN A UNIQUE BRAND
Over 65 years of success gives SCM the centre stage in woodworking technology. This heritage results from bringing together the best know-how in machining and systems for wood-based manufacturing. SCM is present all over the world, brought to you by the widest distribution network in the industry.

65 years history
3 main production sites in Italy
300,000 square metres of production space
17,000 machines manufactured per year
90% export
20 foreign branches
350 agents and dealers
500 support technicians
500 registered patents

In SCM’s DNA also strength and solidity of a great Group. The SCM Group is a world leader, manufacturing industrial equipment and components for machining the widest range of materials.
